

PREPARE FOR DEDICATED

Quality improvement of palliative care for people with dementia and their loved ones

We are pleased that you are interested in improving palliative care for people with dementia.

At DEDICATED, we are happy to contribute to this together with you!

So what exactly is DEDICATED? Rather than a long written explanation, we invite you to watch the video accessible via the QR code next to this.

Working with ambassadors

Within DEDICATED, we work with ambassadors. These are healthcare professionals with a warm heart for palliative care and dementia.

Ambassadors work with the DEDICATED approach, inspire their colleagues (within and outside the organization), and challenge them to work with it as well. For more information, see the QR code.

DEDICATED-trainers

Within DEDICATED, we work with trainers. These are ambassadors who deliver the DEDICATED training. There are two possibilities: either delivering the training within their own organization (to other teams/departments) or delivering the training for DEDICATED (training ambassadors from different organizations in the Netherlands).

Within DEDICATED, work is based on a set of core values to develop 5 core themes.

Learning network

The DEDICATED-ambassadors and -trainers together form a transmural learning network.

The learning network meets (digitally) twice a year to share experiences, progress, and potential challenges, and thus further develop the DEDICATED approach.

5 Core themes

Better interprofessional collaboration (in proactive care planning and a relocation of the person with dementia).

Raising awareness of the importance of timely palliative care for people with dementia and their loved ones.

1. Awareness

Getting to know the person with dementia, their loved ones and each other.

2. Getting to know each other

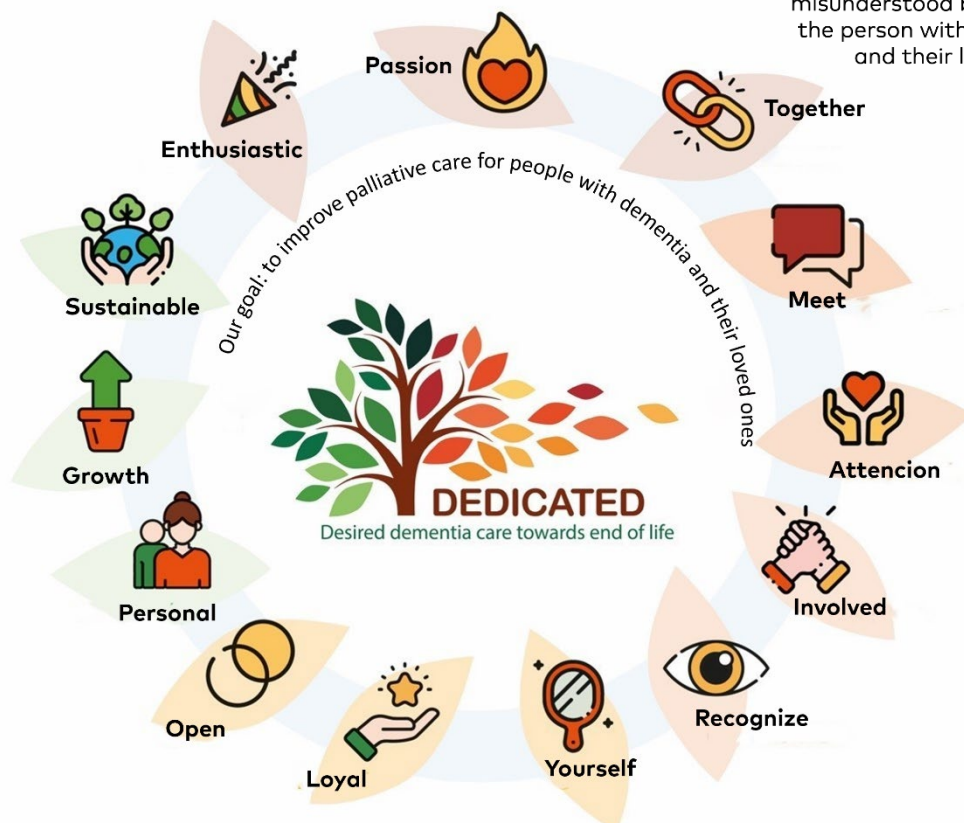

5. Warm transfer when moving

4. Coping with pain and misunderstood behavior

Coping with pain and misunderstood behavior in the person with dementia and their loved ones.

3. Proactive care planning

Early conversations with people with dementia and their loved ones.
